

Email Forensic Investigation Report

Case ID: case_123
Generated: 2026-09-06T19:49:14.262153+00:00

Verdict Summary

Threat Score	29 / 100
Verdict	LOW
Attribution Label	INSUFFICIENT_SIGNAL
Attribution Confidence	0%
Campaign ID	Not correlated with other cases
Limited Forensics Mode	Yes — plain text only, header checks skipped

Sender Information

From (masked)	pr*****@acmecorp.com
From Display Name	—
From Domain	acmecorp.com
Return-Path Domain	—
Subject	Notes from today design review
Date	—

Authentication (SPF / DKIM / DMARC)

Authentication headers unavailable in this input mode.

Network & Geolocation Intelligence

Earliest Public Relay IP	—
Probable Country	—
Probable City	—
ISP / Org	—

Location Disclaimer	—
---------------------	---

Tor Exit Node	—
---------------	---

Known VPN Provider	False
--------------------	-------

Generic Cloud Hosting	False
-----------------------	-------

Domain (WHOIS) Intelligence

Registrar	Network Solutions, LLC
-----------	------------------------

Creation Date	1997-07-07T04:00:00+00:00
---------------	---------------------------

Domain Age (days)	10653
-------------------	-------

Relay Path (Oldest Hop First)

No relay chain available for this input mode.

Scoring Rationale

- ML model classifies message content as phishing (53% probability)

Machine Learning Assessment

The machine learning model classifies this message as phishing.

Top phrases driving this classification:

- 'today' (weight 0.433)

Recommended Actions

This message currently looks safe

- No strong indicators
- Still avoid entering passwords

Evidence Integrity

Evidence SHA-256

94ded1e32e3ec57...

Attribution Limitations

Attribution Limitations: The indicators in this report (IP addresses, geolocation, relay hops, and domain intelligence) describe observed sending infrastructure only. An IP address or hosting location is not equivalent to the identity of a person. Email headers, including Received and Authentication-Results headers, can be forged or manipulated by a sufficiently capable actor. All conclusions in this report should be treated as investigative leads requiring further corroboration, not as definitive proof of identity or location.
